WITHHOLDING PERIODS

Milk Nil

Meat Nil

DOSE RATE

7mL dose rate per head for ewes and rams.
Optimal timing to use ProEwe Gold is prior to mating and lambing.

Not for use in lambs under 35kg.

FURTHER INFORMATION

PRE MATING:

The ideal timing for ewes is at 8 weeks prior to mating and again 4 weeks prior to mating. Ewes can also be treated 2 weeks after mating. Rams can be treated 4-6 weeks prior to mating with the aim of aiding condition and semen quality.

PRE LAMBING:

The ideal timing is around 3-4 weeks prior to lambing. This may tie in with 5 in 1 vaccines. It is important that this pre lamb drench is given no earlier than 5 weeks prior to lambing – from this stage the developing lambs have sufficient organ capacity to store minerals and vitamins. Two drenches two weeks apart is desirable.
