

## Donaghys Cobalt

Donaghys Cobalt concentrate is a liquid mineral supplement for cattle. Cows require cobalt to derive energy from their feed. Cobalt is an essential component of vitamin B12. Cobalt supplementation can help in the prevention of ketosis and promote general good thrift, productivity, fertility and increase the appetite of treated animals.

- Donaghys Cobalt concentrate should be supplemented at times when livestock has a high energy demand, such as in cold weather, times of high production and calving.
- In a liquid form and is ready to use.
- Contains 8.5mg/ml of elemental cobalt derived from cobalt sulphate.
- Donaghys Cobalt concentrate should be used where a deficiency has been identified through animal testing or sampling of feed.

### DIRECTIONS FOR USE:

Dose rate is up to 2ml per cow per day through the water supply. Add 150ml to 200ml per 100 animals per day. Drenched orally the rate is 1.5ml up to a maximum of 2ml per cow per day.

Donaghys Cobalt concentrate can be applied to pasture at 1.5 to 2L of Donaghys cobalt concentrate in at least 200L of water per hectare a minimum of four days before grazing. Treat approximately 1 hectare per 50 animals.

Repeat after 6 weeks as required.
