SIZE | 500ML | 6 PER CARTON

AEROSOL TAIL PAINT

Aerosol dairy mark paint for detecting heat in cows and for stock management use as a general (udder or flank) marker

- Clear visual guide to maximise calving ratio.
- Six vibrant, highly visible non-fading fluorescent colours.
- Weather resistant, non-irritating to cows.
- Demonstrates when cows are on heat / ready for insemination.
- Multiple colours allow you to differentiate failed inseminations and different groups of cows.
- Fluorescent oil based paint formula lasts up to 30 days in suitable conditions.
- Easy to hold can with directional spray nozzle allowing wide or narrow spray patterns.
- Developed from Donaghys extensive research and development programme.
- Available in 500mL aerosol cans (packed 6 per carton).
- Made in New Zealand.

## HOW TO USE DAIRY MARK:

- Shake can vigorously before use.
- For best results ensure that animals are clean and dry (remove any loose hair or dirt).

### PRE-MATING

- For heat detection, apply the aerosol tail paint to the herd 5 weeks before the planned start of mating.
- Apply 3 or 4 passes against the hair, at a distance of 20cm.
- Spray paint strip 20cm long and 5cm wide along the backbone forward from the top of the cow's tail.
- Check tail painted cows for rubbed tail paint at least twice weekly. Record cows with rubbed or broken paint and repaint with a second colour as they have cycled.
- After 24 days have the vet check all cows who have not cycled.

### DURING MATING

- Apply or refresh existing aerosol tail paint to the herd at the planned start of mating.
- Check the tail paint every 24 hours.
- Cows with rubbed or broken paint have been on heat within the past 24 hours and are ready for insemination.
- Re-apply the tail paint 12 hours post insemination with a third colour.
- If the third application of tail paint is rubbed or broken, the cow may have returned to heat and failed to conceive.
- Also can be used to spray the udder, legs or flank at a distance of approximately 20cm to temporarily mark cows for general identification purposes.
- Invert the can and spray until clear to keep the nozzle clear and ready for next use.
