DONAGHYS

Diemos EC

Herbicide for control of broad-leaved weeds in fodder, sugar and red beets.

10 Litre Contains: 160 g/L Phenmedipham and 160 g/L Desmedipham in the form of emulsifiable concentrate

WARNING: KEEP OUT OF REACH OF CHILDREN

INSTRUCTIONS – DONAGHYS DIEMOS EC

BEWARE: APPLY THIS PRODUCT CAREFULLY: SPRAY DRIFT MAY CAUSE SERIOUS DAMAGE TO OTHER DESIRABLE PLANTS.

Diemos EC is a post-emergence selective herbicide for broad-leaved weed control in fodder, sugar and red beets.

DIRECTIONS FOR USE:

Mixing: Ensure spray equipment is thoroughly cleaned before use. Add the required amount of Diemos EC to a partly filled spray tank with the agitation system operating. Add the remaining water and any tank mixture partners. Maintain agitation until spraving is complete. Flush equipment with clean water after use. Note: Do not mix Diemos EC with any foliar nutrients or surfactants.

Do not allow spray mixture to stand overnight. Do not apply in more than 300 Litres of water per hectare.

RECOMMENDATIONS FOR USE

CROP:	TIMING:	RATE:	REMARKS:
Fodder Beet	Apply after the crop has 2 true leaves fully developed	1.5L/ha in 200-300L of water.	Best results are obtained by applying Diemos EC following a pre-emergence application of an Donaghys Ethos herbicide. Make the first application of Diemos EC in a mixture with Donaghys Ethos 2.0L/ha when the weeds are from cotyledon to 2 true leaf stage and a second 10-14 days later.
Sugar beet and red beet	Apply after the crop has 2 true leaves fully developed. Weeds up to 4 true leaf. Weeds from 4-6 true leaves and hard to kill weeds up to 4 true leaves.	Damage may occur, especially on Red Beet, if treated prior to the 2 true leaf stage. Best results are obtained when weeds are treated at the youngest possible stage.	

CONDITIONS OF SUPPLY: READ THESE CONDITIONS OF SUPPLY BEFORE BUYING AND USING. IF THESE CONDITIONS ARE UNACCEPTABLE, RETURN AT ONCE UNOPENED.

RESISTANCE MANAGEMENT

GROUP	C1	HERBICIDE

Diemos EC is Group C1 herbicide, contains phenmedipham and desmedipham belonging to the phenyl-carbamates chemical family with the inhibition of notosystems II mode of action. Some naturally occurring weeds may become resistant when excessive use of the same herbicide occurs. To prevent or delay development of resistance, use in tank mixes and/or rotate use with herbicides with a different mode of action. Refer to http://resistance.nzpps.org/ index.php for alternative modes of action and details of resistance management strategies (if any) for the crops listed on the label.

Susceptible weeds include: Seedling stages of: Chickweed, Fathen, Fumitory, Groundsel, Redroot, Shepherd's purse, Spurrey, Nettle and Twin cress. Black nightshade, Cornbind and Willow weed are controlled only up to four true leaf stage.

esistant weeds include: Grass weeds, mature annual broad-leaved weeds, perennial broad-leaved weeds and wireweeds.

It is an offence for users of this product to cause residues exceeding the relevant MRL in the Food Notice: Maximum Residue Levels for Agricultural Compounds WITHHOLDING PERIOD: Fodder Beet - 56 days, Do not graze stock on treated areas for 56 days after spraving.

ADDITIONAL INFORMATION:

ecommendations

Do not apply if air temperature is likely to rise above 29°C and avoid treatment if rain is likely before spray has dried on foliage. Herbicide activity will be wed down in cool weather.

HSNO Classification: 3.1D: 6.1D: 6.3B: 6.4A: 6.5B: 6.9B: 9.1A: 9.2A: 9.3C

WARNING: Harmful if swallowed. Harmful in contact with skin. Causes mild skin irritation. Causes eve irritation. May cause an allergic skin reaction. Harmful - may cause organ damage from repeated oral exposure at high doses. May cause respiratory irritation. Very toxic to aquatic organisms with long-lasting effects. Very toxic to the soil environment. Harmful to terrestrial vertebrates.
