

Donaghys Cronus

A selective herbicide for the control of thistles and certain other broadleaf weeds in fodder brassicas, pasture, forestry, turf and many other crops.

Active Ingredient: Contains 300g/litre clopyralid as the monoethanolamine salt, in the form of a soluble concentrate.

- Donaghys Cronus is absorbed by the plant through the leaves, stems and roots. It is translocated into the plant where it interferes with cell division and elongation.
- Use Donaghys Cronus to control clovers, yarrow, plantains, Californian and other thistles.
- Best results are obtained when there is adequate soil moisture; the weeds are not under stress and are actively growing with clean foliage.
- Donaghys Cronus may be tank mixed with other most commonly used herbicides.

WARNING:

Donaghys Cronus is damaging to clovers. A rate of 100ml/ha will severely suppress clovers for 2-6 months. Above this rate and clover may be removed from the pasture.

Withholding Period: No withholding period is required when used as directed.

TIME OF APPLICATION:

- Do not apply to weeds under growth stress (frost, drought).
- Do not spray if rain is likely within 3 hours of application. Do not allow spray drift outside the target area to occur as it may cause serious damage to desirable plants.

MIXING:

Add the required quantity of Donaghys Cronus to spray tank partly filled with water and maintain agitation through filling and spraying.

APPLICATION:

Aerial Spraying: Apply 200-400L of water/ha. Use the half overlap opposite pass technique.

Boom Spraying: Apply up to 300L of water/ha using conventional boom equipment.

Handgun: Use a No.6 tip at 1000-2000kPa and ensure complete coverage for high volume coverage.

Mistblower: Use 40ml/L of water to control woody weeds. With a ULV attachment, use 200ml/L of water using a number 3 or 4 hole. Thorough coverage is essential.

Knapsack: Apply using at least 400L of spray mix per ha. For spot treatment ensure thorough coverage.

Weed Wipers: Ensure the wiper remains saturated while in use. A double pass in opposite directions will give best results.
