

Donaghys Diemos

Donaghys Diemos is a post-emergence selective herbicide for broad-leaved weed control in fodder, sugar and red beets.

ACTIVE INGREDIENTS: Contains 160g/L Phenmedipham and 16g/L Desmedipham in the form of suspo-emulsion.

- Donaghys Diemos may be broadcast or band sprayed. For band treatment ensure that the use rate per sprayed are is consistant with label recommendations.
- Best results are obtained by applying Donaghys Diemos following a pre-emergence application of an Ethofumesate herbicide.

BEWARE

Apply this product carefully; spray drift may cause serious damage to other desirable plants.

WITHOLDING PERIOD: Fodder Beet – 56 days. Do not graze stock on treated areas for 56 days after spraying.

TIME OF APPLICATION:

- Do not apply if air temperature is likely to rise above 29°C and avoid treatment if rain is likely before spray has dried on foliage. Herbicide activity will be slowed down in cool weather.
- First application should be when the weeds are from cotyledon to 2 true leaf stage

MIXING:

Ensure spray equipment is thoroughly cleaned before use. Add the required amount of Donaghys Diemos to a partly-filled spray tank with the agitation system operating. Add the remaining water and any tank mixture partners. Maintain agitation until spraying is complete. Flush equipment with clean water after use.

Note: Do not mix Donaghys Diemos with any foliar nutrients or surfactants.

Do not allow spray mixture to stand overnight. Do not apply in more than 300 Litres of water per hectare.

Donaghys Diemos

APPLICATION RATES AND COMMENTS:

CROP	TIMING	RATE	REMARKS
Fodder Beet	Apply after the crop has 2 true leaves fully developed	1.5L/ha in 200-300L of water	Best results are obtained by applying Donaghys Diemos following a pre-emergence application of an Ethofumesate herbicide. Make the first application of Donaghys Diemos in mixture with Ethofumesate 2.0L/ha when the weeds are from cotyledon to 2 true leaf stage and a second 10-14 days later.
