

Premium Bloat AF

Premium Bloat AF is EO/PO block co-polymer based product for drenching and trough treatment to prevent and control frothy bloat in cows. It is specifically formulated to be safe for use through alkathene piping. Containing 88%w/v EO/PO block co-polymer and food grade red dye as colorant.

Contains 880 g/L of Ethylene Oxide/Propylene Oxide Block Co-polymers

- Safe for use through alkathene piping
- Cold water soluble
- Red colour for indication
- Viscosity controlled for ease of mix
- Compatible with soluble or suspension additives
- Low dose rate for effective control – 88% w/v EO/PO block co-polymer
- Long persistence time in the rumen

DIRECTIONS FOR USE:

Start treatment before the risk becomes severe using a low dose rate to accustom stock to the treatment.

For in line dosing start dosing 3 weeks before the onset of a bloat challenge at a rate of 4ml/ cow every 24 hours. One week before the expected bloat challenge, increase the dose to 7ml. During the bloat challenge a dose rate of 10ml per cow every 24 hours must be used. These rates are for undiluted product.

For manual trough treatment Premium Bloat AF is added as a diluted premix twice per day. The premix is made by adding 1 part of Premium Bloat AF to 4 parts of water. Refer to table below for dose rates and timing. Pre-treat all water troughs with 150ml of premix to every 100 litres of water before regular dosing.

Routine Drenching:

Drenching: Dose each animal with 25 to 50ml of 1:4 premix, depending on severity of bloat, every 12 hours.

Severe Bloat: Drench the animal with 300ml of 1:9 (30ml Premium Bloat AF and 270ml warm water) from a long neck bottle.

	3 Weeks before onset of bloat	1 Week before onset of bloat	During bloat challenge
	Premium Bloat AF per cow every 24 hours		
Dosing System	4ml	7ml	10ml
	1:4 Diluted mixture per cow every 12 hours		
Manual Trough Treatment	8ml	10ml	16ml
Drenching	-	-	25-50ml
