

## Donaghys Mycowet®

Donaghys Mycowet® is an ORGANOSILICONE super-spreader to enhance the spreading and foliage deposition of Mycotak and Myco-RF fungicides.

Donaghys Mycowet® surfactant is the approved companion for Mycotak® and Myco-RF® applications.

- Targets the plant base. Mycowet® takes the Mycotak® to the base of the plant where it is absorbed and travels up and throughout the plant.
- Increases rainfastness. Mycowet® allows quick uptake of Mycotak® and Myco-RF®. It enables the fungicides to be rainfast within 3 hours instead of up to 3 days in non-Mycowet applications.
- Enables lower water rates. Mycowet® increases spreading 40 fold and therefore water application can be reduced to 50 litres/ha. This makes helicopter application practical and economical. Without Mycowet®, water rates are 100-200 litres/ha.

### APPLICATION RATES:

Mycowet – 100mL / Hectare

### Water Rates

Aerial – 50 Litres / Hectare

Ground – 100-200 Litres / Hectare
