

## **Aylesbury Autumn 2**

The trial was on an Aylesbury intensive sheep and beef farm. The trial area was irrigated ryegrass-white clover based pasture. The plots were measured at Day 21. The experiment was conducted with five replicates.

LessN 40 was performed above Urea 80 but not statistically significantly so. Only LessN 40 performed statistically significantly above control.

Table and Graph of Pasture Dry Matter Production (kg/ha) Day 21

Treatment	DM Day 21
Control	870 <sup>a</sup>
Urea 80	1076 <sup>ab</sup>
LessN 40	1313 <sup>b</sup>

<sup>\*</sup> Treatments that share the same letter are not statistically significantly different from each other (95% confidence level).
